MIDWEST TRUCK DRIVING SCHOOL

ESCANABA, MICHIGAN · EST. 1998

● WELCOME

# YOU'RE THINKING ABOUT DRIVING TRUCK.

You're thinking about driving truck. Or you've already decided you're going to, and now you're trying to figure out how.

Either way, you've probably noticed that the internet is full of people trying to sell you something — schools, recruiters, job boards, YouTube guys with affiliate links — and almost nobody's actually straight with you.

That's what this guide is for.

We built it because we kept watching the same thing happen. Somebody walks into a CDL career excited and ready, and three months later they're locked into a contract they can't get out of, driving a beat-up truck for half the pay they were promised, wondering how they ended up there. That doesn't have to be you.

This isn't a brochure or a pitch. It's a walk-around of every decision you're going to make before you commit — what the life actually looks like, what the money actually is, where the traps are, and how to tell a good school from a bad one.

If you read this and decide trucking's not for you, that's fine — better to know now. And if you read this and you're more sure than ever, we'll tell you exactly what to do next.

## ● HOW TO USE THIS GUIDE

# A PLAYBOOK, NOT A TEXTBOOK.

This is a playbook, not a textbook.

You can read it front to back, or flip to whatever section answers the question on your mind right now. Each section is a **checkpoint** — a specific decision you need to think through before you commit.

Here's how we'd suggest using it.

**Start with the Self-Assessment on the next page.** It's twelve yes-or-no questions and it'll take you about five minutes. By the time you finish, you'll have a clearer picture of whether this career is likely to fit you, and where you'll probably struggle.

**Then work through the checkpoints.** There are nine of them, covering lifestyle, money, career paths, training, credentials, the first year, day-to-day living, the common myths, and your decision framework. Go in order if you're starting from scratch, or skip around if you already know what you're looking for.

**End with the framework.** It includes questions to ask yourself, questions to ask a driver, and questions to ask any school — plus a clear next step.

Take notes, push back where we got something wrong, and ask harder questions than the ones we did.

This is your decision. We just want to make sure you have the information to make it well.

● A NOTE FROM MTDS

# A QUICK WORD BEFORE WE GET TO IT.

A quick word about who put this together, and then we'll get to it.

Midwest Truck Driving School trains people for careers in trucking and the skilled trades. We're based in Escanaba, Michigan, and we've been doing this long enough to have seen what works and what doesn't.

Here's what's relevant to you. **We're not the only school out there.** We're not the cheapest, the fastest, or the closest to wherever you live. There are good reasons to choose us, and there are good reasons people choose other schools.

What we are is the school willing to put this guide together. Most schools won't, because an honest guide to this career — one that names the traps, calls out the bad actors, and tells you what the work is actually like — would cost them students.

We don't see it that way.

If you read this and figure out trucking isn't your path, we'd rather know that now than have you find out three months into training. And if you read this and you're more sure than ever, we want you to walk into that decision with your eyes open — whether you train with us or somewhere else.

Pull up a chair. Let's get into it.

*Pull up a chair. Let's get into it.*

● THE NINE CHECKPOINTS

# CONTENTS

## 01 THE HONEST LOOK AT THE LIFE

What the work actually feels like, across OTR, regional, local, and specialized lanes.

---

## 02 THE MONEY

Real pay across year one, three, and five. Pay structures, financial aid, and the "free training" trap.

---

## 03 THE CAREER PATHS

Pay versus home time. Specialized lanes. The owner-operator question.

---

## 04 THE TRAINING DECISION

How to evaluate any CDL school. Red flags, green flags, and the ten questions to ask.

---

## 05 THE CREDENTIALS

Classes, endorsements, the DOT physical, and what actually disqualifies you.

---

## 06 THE FIRST YEAR

The trainer phase, the first solo months, and the ten questions to ask every recruiter.

---

## 07 THE LIFESTYLE TOOLKIT

Health, family, mental wellbeing — and what to actually pack.

---

## 08 THE MYTH AUDIT

Eight of the most common misconceptions, called out and corrected.

---

## 09 YOUR DECISION FRAMEWORK

Ten questions to ask yourself, ten for a driver, ten for a school. Plus your next move.

---

● SELF-ASSESSMENT

# THE 5-MINUTE SELF-ASSESSMENT.

## # THE 5-MINUTE SELF-ASSESSMENT

Before you read another page, do this. It's twelve yes-or-no questions, with one rule — don't answer the way you wish you'd answer. Answer the way you actually would.

There's no wrong score and there's no passing grade. The point is to give you an honest snapshot of where you are right now, so you know which parts of this guide to pay the most attention to.

A pen and a notepad will work, but your phone notes are fine too. Track your Yes answers — we'll come back to them at the end.

*Twelve questions. About five minutes.*

## 01. ARE YOU COMFORTABLE BEING ALONE?

We're talking about long stretches — sometimes ten or more hours a day with just you, the road, and your own thoughts. Some people find it peaceful, and some find it punishing. There's no right answer here, but you need to know which one you are.

## 02. CAN YOU HANDLE MODERATE PHYSICAL WORK?

You'll be climbing in and out of a truck and walking around it for inspections multiple times a day. Depending on the job, you might also be handling loads, tarping, chaining, or hooking up trailers. It's not construction work, but it's not a desk either.

## 03. CAN YOU WAKE UP EARLY, ON TIME, EVERY DAY — WITHOUT SOMEONE MAKING YOU?

Trucking runs on schedules — pickup times, delivery windows, and DOT regulations. Nobody is going to call you in the morning to make sure you're up, so if you can't run your own clock, this career will be painful.

## 04. DO YOU HAVE A CLEAN DRIVING RECORD?

Most carriers want to see no more than one or two minor violations in the last three years, and no DUI in the last five to ten depending on the carrier. Reckless driving, multiple accidents, or a suspended license in recent years will make it hard to get hired — even after you have your CDL.

## 05. ARE YOU WILLING TO PASS A DOT PHYSICAL AND A FEDERAL DRUG TEST?

The DOT physical checks vision, hearing, blood pressure, and a few other things. The drug test is federal, which means **THC is still disqualifying, even in states where it's legal** — and that can include CBD products that trigger a positive. If marijuana is part of your current life and you're not willing to walk away from it, this career isn't going to work.

## 06. HAVE YOU HAD A REAL CONVERSATION WITH YOUR FAMILY?

If you've got a partner, kids, or anyone at home depending on you, have you actually talked to them about what trucking would mean for your home time? Not "I'm thinking about it" — a real, honest conversation where you laid out what the life might look like for everyone involved.

## 07. CAN YOU GO 30-60 DAYS WITH LIMITED OR NO INCOME?

Training takes time, and your first paycheck takes time after that. Even with financial aid covering tuition, you'll likely have weeks where money is tight. Do you have a plan for that — savings, a partner's income, a side gig, or a temporary fallback?

## 08. ARE YOU COMFORTABLE FOLLOWING DETAILED RULES?

Hours of Service, electronic logs, pre-trip inspections, weight limits, speed limits — federal regulations cover almost every part of this job. Some drivers love the structure, and others chafe under it. Which one are you?

### **09. ARE YOU STARTING FROM "I WANT THIS," NOT "I HAVE NO OPTIONS"?**

This one matters more than people realize. People who choose trucking because they want it tend to make it, and people who choose it because they feel like they've run out of options tend to wash out within a year. If you're in the second group, that's not a dealbreaker — but you need to look hard at why this and not something else.

### **10. CAN YOU HANDLE BEING TOLD WHAT TO DO BY A DISPATCHER YOU'VE NEVER MET?**

For your first year or two, you're going to take loads, routes, and schedules from somebody on the other end of a phone or a tablet. Sometimes the load will make sense, and sometimes it won't. Can you roll with that without letting it ruin your day?

### **11. ARE YOU WILLING TO START AT THE BOTTOM FOR 6–12 MONTHS?**

Entry-level pay, less desirable routes, older trucks, the shifts nobody else wants — this is how almost every trucking career starts, even for people who are great at it. After six to twelve months, you'll have real options. Before that, you don't.

### **12. ARE YOU ACTUALLY CURIOUS ABOUT HOW THINGS MOVE?**

Fuel, food, lumber, steel, cars, medical supplies — everything you buy got somewhere on a truck. Some people find that fascinating, and some people don't think about it twice. The drivers who find it interesting tend to last, and the ones who don't tend to burn out.

**● SCORING**

# COUNT YOUR **YES ANSWERS.**

## **10-12 YES — STRONG FIT SIGNAL.**

You're answering the way drivers who succeed tend to answer. Move forward with confidence. The rest of this guide will sharpen your decisions, not change the direction you're already pointed.

## **7-9 YES — POSSIBLE FIT.**

You're close. The questions you answered No on are the ones worth examining. Some Nos are dealbreakers (the DOT physical, the drug test, the driving record), but others are things you can change with time or planning (savings, family conversation, comfort with solitude). Read this guide closely, and pay extra attention to the checkpoint that addresses your weakest area.

## **4-6 YES — MAYBE.**

There's serious friction between this career and your current situation. That doesn't mean "no" forever — it means "not yet, and only if you address what's blocking you." Be honest with yourself about which No answers are temporary problems and which ones are pointing to a deeper mismatch.

## **0-3 YES — PROBABLY NOT THE RIGHT FIT, AT LEAST FOR NOW.**

This is the honest answer. Most schools won't tell you this — they'll take your money and let you find out later. We'd rather you find out in five minutes.

● WHAT YOUR SCORE TELLS YOU

# YOUR SCORE ISN'T A VERDICT — IT'S A **STARTING POINT.**

Your score isn't a verdict — it's a starting point.

What the assessment really does is tell you what to pay attention to. The questions you answered No on are the friction points, and they're the parts of this guide you can't skim.

If your No answers were mostly about lifestyle — solitude, physical work, structure — read Checkpoint 1 carefully.

If they were mostly about money — income, savings, costs — Checkpoint 2 is for you.

If they were about your record, your health, or your background — Checkpoint 5.

If they were about your family situation or your reasons for considering this — Checkpoint 9, the decision framework, is where you'll get the most out of this guide.

Either way, keep going — the next checkpoint is the most important one in the whole guide.

What does this life actually look like?

*Now: what does this life actually look like?*

CHECKPOINT 01

CHECKPOINT 01

# THE HONEST LOOK AT THE LIFE

---

Most of what people picture when they think about trucking comes from movies, recruiting ads, or somebody's uncle who drove twenty years ago. None of those are wrong exactly, but none of them are the whole picture either, and most of them are at least a little out of date.

BEFORE THE WHEEL · A FUTURE TRUCKER'S PLAYBOOK

**M**ost of what people picture when they think about trucking comes from movies, recruiting ads, or somebody's uncle who drove twenty years ago. None of those are wrong exactly, but none of them are the whole picture either, and most of them are at least a little out of date.

What we're going to do in this checkpoint is walk you through what the work actually looks like — not the brochure version, not the doom-and-gloom version, just the real version. By the end, you should be able to picture yourself in this life clearly enough to know whether you want it.

One thing to get straight up front: trucking isn't one job. It's four or five different jobs that happen to share the same equipment and the same license. The lifestyle of an over-the-road driver running coast-to-coast is almost nothing like the lifestyle of a local driver who's home every night, and knowing the difference is half the decision.

Let's walk through the main versions.

## A DAY IN THE LIFE: FOUR VERSIONS

### **Over-the-Road (OTR)**

OTR drivers run long routes — sometimes coast-to-coast — and they live in the truck for stretches of two, three, or even four weeks at a time before they get a few days at home. Most OTR trucks have a sleeper cab, which is basically a small bedroom behind the driver's seat with a bed, some storage, and a power outlet for a fridge or a microwave.

A typical day starts with a pre-trip inspection on the truck. Then you drive — federal regulations let you be behind the wheel for up to eleven hours in a fourteen-hour window, with a required thirty-minute break somewhere in there. When your hours run out, you find a place to park, usually a truck stop or a rest area, and you sleep in the truck. The next day starts the same way.

The pay tends to be the highest among the main job types, because the carriers are paying for your willingness to be away from home. But you're trading home time for that money, and the trade is the thing OTR drivers either love or eventually burn out on.

### **Regional**

Regional driving is the middle ground. You're running within a defined area — the Midwest, the Northeast, a multi-state territory — and you're usually home most weekends, sometimes during the week. You'll still sleep in the truck some nights, but a lot fewer than an OTR driver.

The pay is typically a little lower than OTR, but the lifestyle is more sustainable for people with families, hobbies, or anything else they want to come home to regularly. A lot of drivers start OTR for the experience and the money, then move to regional once they've got their feet under them.

If OTR is "live in the truck, visit home," regional is "work the road, live at home."

### **Local**

Local drivers are home every night. The routes are familiar — often the same customers, the same warehouses, the same roads, week after week. The trucks are usually day cabs, meaning no sleeper, because nobody's sleeping in them.

The tradeoff is that local jobs often involve more physical work. More stops in a day means more loading and unloading, more lift gate work, and more time on your feet. The pay is often hourly or by-the-stop instead of by-the-mile, which has its own pros and cons that we'll get into in the money checkpoint.

Local driving is what most non-drivers picture when they hear "truck driver" — but ironically, it's often the hardest type of job for a brand-new CDL holder to land. Most local jobs want a year or two of experience first

## WHO THRIVES, WHO STRUGGLES

After enough years of this, you start to see patterns in who makes it and who doesn't.

The drivers who thrive tend to be self-directed, comfortable with their own company, and able to find satisfaction in the work itself rather than in external validation. They like solving problems — a tight loading dock, a weather change, a route adjustment — without needing somebody to walk them through it. They're patient with the parts of the job that are slow, and steady through the parts that are stressful.

The drivers who struggle tend to need more external structure — a boss looking over their shoulder, a team to talk to, a clear nine-to-five rhythm. They get restless or anxious in long stretches of solitude, and they tend to want things to be different than they are instead of working with what's in front of them.

None of this is a moral judgment. Some of the best people we know would be miserable in a truck, and that's not a flaw — it just means they belong somewhere else. The point is to be honest with yourself about which group you're closer to, because the job won't bend to fit you. You'll have to bend to fit it.

## THE HIDDEN UPSIDES

The downsides of trucking get talked about a lot, especially online. The upsides get less airtime, so here are a few worth naming.

**Quiet.** Most jobs in 2026 involve constant pings, meetings, group chats, and interruptions. Trucking, for a lot of drivers, is one of the last jobs left where you can spend most of your day inside your own head.

**Independence.** Once you've earned some trust at your carrier, you're operating on your own most of the day. Nobody's micromanaging the half hour between stops, and nobody's tracking when you stop for coffee.

**Adult money, fast.** A lot of careers want you to spend four to ten years climbing before the pay gets serious. A new CDL holder with a clean record can be making real money within months, not years — we'll get into specific numbers in Checkpoint 2.

**A real skill.** Operating a forty-ton vehicle through weather, traffic, and tight spaces is a skill that takes time to develop and that nobody can take from you. The pride drivers have in that skill is real, and it's underrated by people who've never done the work.

**A view.** This sounds small, but ask any driver and they'll tell you about a sunrise over the mountains, a moose crossing in the U.P., or a lightning storm rolling across Nebraska. You'll see more of this country than most of the people you grew up with.

## THE HARDEST PARTS (TOLD STRAIGHT)

We owe you the other side of this too.

**It's hard on your body.** Long stretches of sitting are bad for your back, your hips, and your circulation. Truck stop food is mostly fried, and sleep on the road is rarely as good as sleep at home. Drivers who don't actively manage their health pay for it later, and we'll talk about how to manage it in Checkpoint 7.

**You'll miss things.** Birthdays, games, anniversaries, the first day of school — OTR drivers miss more, local drivers miss less, but every type of trucking job involves some version of this trade. You need to be honest with yourself and your family about it before you commit, not after.

**The eating and sleeping rhythms are weird.** You may not eat dinner at dinnertime, and you may sleep in the daytime. Your body adjusts, but it takes work, and it never quite matches the rhythm of people on a normal schedule.

**The mental piece is real.** Some drivers love the solitude, and others find that after enough weeks alone in the truck, their head starts to feel like it's working against them. There's no shame in either reaction, but you should know going in which kind of person you are — and have a plan if it turns out you struggle.

**The first year is the hardest.** Almost every driver who quits, quits in year one. The combination of new lifestyle, new schedule, new pay structure, and a learning curve on the actual driving is a lot at once. The drivers who make it past month twelve tend to make it long-term, which is worth holding onto when month three feels rough.

## WHAT THIS MEANS FOR YOUR DECISION

The point of this checkpoint isn't to talk you into anything or out of anything. It's to make sure that when you make your decision, you're making it about the life you'd actually live and not the life you imagined from a recruiting ad.

If you've read this and you can see yourself in it — even the hard parts — that's a strong signal worth listening to. And if you've read this and the hard parts sound worse than you expected, that's worth listening to too. The work doesn't get easier than this when you're actually doing it, so if the description on paper feels like too much, the reality won't change your mind.

Now let's talk about the part most people are trying to figure out anyway.

The money.

### TAKE FROM THIS CHECKPOINT

## THE HONEST LOOK — RECAP

- Trucking is four or five different jobs sharing one license. Lifestyle differs more by lane than by carrier.
- OTR runs furthest, pays the highest entry-level wages, and asks the most of your home time. Regional, dedicated, and local trade money for time at home.
- The drivers who thrive are self-directed and comfortable in their own company. The ones who struggle need external structure to function.
- The hardest year is the first one. Almost everyone who quits, quits early — make it past month twelve and most drivers stay.
- The decision isn't whether trucking is a good career. It's whether **this** version of work matches **your** version of a good life.

*Now: the question most people are really asking.*

CHECKPOINT 02

CHECKPOINT 02

# THE MONEY

---

The money is what most people are actually trying to figure out, and it's also the thing that gets lied about more than anything else in this industry. Recruiting ads quote top numbers that almost nobody hits in year one, and doom-and-gloom posts online quote bottom numbers that don't reflect what serious drivers earn either.

**T**he money is what most people are actually trying to figure out, and it's also the thing that gets lied about more than anything else in this industry. Recruiting ads quote top numbers that almost nobody hits in year one, and doom-and-gloom posts online quote bottom numbers that don't reflect what serious drivers earn either. The truth is in between, but it isn't a single number — it depends on the job type, your experience, the carrier, the freight, and how many miles you're willing to run.

What we're going to do in this checkpoint is walk you through the real ranges, explain how drivers actually get paid, lay out what it costs to get started, and then help you understand the financial aid options. We'll also explain the "free" training trap, which is the thing the big carriers don't want you thinking too hard about.

## WHAT YOU'LL ACTUALLY MAKE

### Year One: \$45,000 to \$65,000 Realistic

A new CDL holder with a clean record can reasonably expect to land somewhere in the \$45,000 to \$65,000 range in their first year. The lower end is closer to where you'll be if you sign with a mega-carrier and run their basic OTR program — entry-level cents-per-mile, less desirable routes, and the slow buildup of trust that comes with being new. The upper end is more typical of carriers with stronger pay structures, decent sign-on bonuses, or freight that pays better than basic dry van.

LANE	YEAR ONE	YEAR THREE	YEAR FIVE+
Over-the-Road (OTR)	\$55–65K	\$70–82K	\$80–95K
Regional	\$48–58K	\$62–75K	\$72–88K
Dedicated	\$50–62K	\$65–78K	\$75–90K
Local / LTL	\$45–55K	\$60–72K	\$70–85K
Specialized	\$58–70K	\$78–95K	\$95–120K+

You'll see numbers higher than this online. National salary averages for "CDL drivers" can show \$70,000 or more, but those averages include experienced drivers with five, ten, or twenty years on the road. They aren't what year one looks like for somebody just starting out, and treating them as a year-one expectation is the most common way new drivers end up disappointed.

### Year Three: \$65,000 to \$85,000

By year three, if you've stayed clean and built some experience, you're picking up better routes, working with dispatchers who know your name, and qualifying for jobs that wouldn't have hired you out of school. The pay reflects that. Most three-year drivers land between \$65,000 and \$85,000, with the higher end going to drivers who've moved into regional or local jobs with strong pay, or who've added endorsements like Hazmat or Tanker.

### Year Five and Beyond: \$80,000 to \$100,000+

At this point you have real career options. Veteran company drivers in dry van regularly clear \$80,000 to \$90,000, and drivers in specialized freight — hazmat, tanker, flatbed, oversized, auto transport — often clear \$100,000 and run well above it. Owner-operators who run their business well can do even better, though there's a real conversation to be had about gross

## HOW DRIVERS ACTUALLY GET PAID

The biggest single thing that confuses new drivers is the pay structure. There are four main models in trucking, and which one you're on can change your real income by thousands of dollars even when the headline numbers look the same.

**Cents Per Mile (CPM)** is the most common structure for OTR and regional work. You get paid a set rate for every mile driven, often \$0.40 to \$0.55 for new drivers and climbing to \$0.60 to \$0.75 with experience and endorsements. The good news is that the harder you run, the more you make. The bad news is that you don't get paid for time spent waiting at shippers, sitting in traffic, or stopped for repairs.

**Hourly pay** is most common in local jobs. You're paid for the hours you work — whether you're driving, loading, or waiting — and the hourly rate often looks low compared to CPM math. Factor in overtime, though, and you can come out ahead, especially if the route involves long stops or unpredictable schedules.

**Salary** is offered by some carriers, particularly on dedicated routes and certain regional jobs. You make the same number every week regardless of miles, which appeals to drivers who want predictable income but tends to underpay drivers willing to run hard.

**Percentage pay** mostly applies to owner-operators and some specialized work. You get a cut of the load — typically 25% to 35% — and the rest goes to the carrier or your business expenses. This is the highest-ceiling and highest-risk model in trucking.

**Per diem** is a non-taxable daily allowance that covers meals and incidentals on the road, usually \$50 to \$70 per day for OTR drivers. It reduces your taxable income, which means more money in your pocket but a lower W-2 number on paper. That can matter when you go to buy a house or finance a car, so it's worth understanding the tradeoff before you opt in.

**A note on sign-on bonuses.** Carriers advertise bonuses of \$5,000, \$10,000, sometimes \$15,000 to attract new drivers, and you should read the fine print every single time. Most bonuses are paid out over 12 to 24 months instead of in a lump sum, and most include clawback clauses that mean you owe the unpaid portion back if you leave the carrier before the bonus is fully paid. A \$10,000 bonus paid at \$500 a month over 20 months is \$500 a month of additional income, not a windfall — and if you quit at month ten, you may owe several thousand dollars back.

## WHAT IT ACTUALLY COSTS TO GET STARTED

Tuition is the biggest piece, but it isn't the whole picture. The honest total for getting from "no CDL" to "ready to start your first job" looks something like this in 2026.

EXPENSE	TYPICAL RANGE
Tuition (private school)	\$4,000–\$8,000
DOT physical	\$80–\$150
CDL permit fees	\$30–\$100
CDL skills/road test	\$50–\$250
Endorsement testing (each)	\$10–\$50
Living expenses during training	\$0–\$2,000+

**CDL tuition.** A reputable private CDL school in 2026 runs between \$4,000 and \$7,000 for a basic Class A program, with the cheapest legitimate programs around \$3,000 and the most expensive specialized programs over \$10,000. Community colleges can run cheaper but often have long waitlists, automatic-only training (which restricts what you can drive), and less individual instructor time. Anything advertised under \$2,000 deserves serious scrutiny — at that price, something is being cut.

**DOT physical and drug screen.** \$75 to \$200 depending on the provider, and required before you can get your permit.

**Commercial Learner's Permit and CDL state fees.** \$90 to \$250 total depending on your state, covering the written tests, the permit, and the license itself once you pass.

**Endorsement tests.** \$10 to \$25 per endorsement, plus background check fees for Hazmat — the TSA background check alone runs around \$86.

**Living expenses during training.** Most full-time CDL programs run three to four weeks, and if you aren't working during that time, you need to cover three or four weeks of rent, food, and bills with no paycheck coming in. A realistic budget here is \$1,000 to \$3,000 depending on your situation.

**The honest total.** For somebody paying out of pocket without any aid, plan for \$5,500 to \$10,000 from "I'm starting" to "I'm earning my first paycheck." That's the number that

## HOW PEOPLE ACTUALLY PAY FOR IT

Most people don't pay for CDL training out of pocket, and most don't need to. There's a real ecosystem of programs designed to help people get into the trades, and the list of options is wider than most prospective students realize. Here are the ones that actually apply at MTDS.

**WIOA (Workforce Innovation and Opportunity Act).** This is a federal workforce development program that funds training in high-demand careers, and trucking has been on that list nationally for years. If you're unemployed, recently laid off, or low-income, WIOA can often cover 100% of CDL training tuition at approved providers. You apply through your local American Job Center — the official locator is at [CareerOneStop.org](https://www.careeronestop.org).

**Michigan Works.** This is Michigan's workforce development network and it operates in parallel with WIOA. Michigan Works can fund training, job search support, and certain wraparound services for residents who qualify. If you're in Michigan or the Upper Peninsula, this is your most direct route to state-funded support.

**TAA (Trade Adjustment Assistance).** This is a federal program specifically for workers who lost their jobs due to foreign trade — typically manufacturing layoffs. TAA can cover full training costs plus extended unemployment benefits while you train. If you've been laid off and your former employer was affected by trade, ask about TAA when you apply for unemployment.

**MRS (Michigan Rehabilitation Services).** If you have a disability that affects your employment, MRS provides vocational rehabilitation services, and that can include funding CDL training if it's a viable career path for your situation.

**Michigan and Wisconsin DNR programs.** Department of Natural Resources programs can sometimes fund training for residents transitioning into licensed trades, depending on the state's current workforce priorities. Worth asking about if you're in either state.

**VA Educational Benefits.** Veterans using the Post-9/11 GI Bill or related benefits can cover full tuition at VA-approved CDL schools, plus a monthly housing allowance during training. This is one of the most valuable benefits for veterans considering trucking, and it should be the first thing you check if you served.

**TARFF Educational Loan.** This is a private student loan program that specializes in trade school financing. It isn't need-based — it's a loan you pay back — but it's structured for trade programs that don't qualify for federal student aid.

**Klarna Financing.** Klarna is a third-party financing option for students who don't qualify for the programs above. Approval-based and credit-check required.

**Bank loans, cash, money order, and payment plans.** Standard personal loans, secured loans, cash, money order, and in-house payment plans round out the options for students who don't fit into the categories above.

## THE "FREE" TRAINING TRAP

The biggest carriers in trucking — the ones with the biggest recruiting budgets and the most aggressive YouTube ads — all offer "free" CDL training. Pay attention to that word, because it's doing a lot of work.

Here's how the math actually works. A carrier sponsors your CDL training, which costs them somewhere around \$5,000 to \$7,000. In exchange, you sign a contract committing to drive for them for a set period — typically 8 to 14 months, sometimes longer. If you quit before the contract is up, you owe the pro-rated balance of the tuition. Quit at month six of a 12-month contract on \$6,000 of tuition, and you owe \$3,000 immediately. Many of these contracts also include clauses that restrict what you can do during that period and after.

What you're actually trading is your freedom in the year that matters most.

In year one, you're learning what you like and what you don't, which carriers treat drivers well and which ones don't, what kind of freight suits you and what kind doesn't. The drivers who land somewhere good in year one tend to stay in the industry for a long time. The drivers who land somewhere bad and can't easily leave tend to quit trucking entirely.

When you're locked into a contract, you don't get to make that choice. If the carrier assigns you to a trainer who's harassing you, you can't easily leave. If the freight is bad, the equipment is broken, or the pay turns out to be lower than what you were promised, your options narrow to "tough it out" or "owe several thousand dollars you don't have." Plenty of drivers make it work and come out fine. Plenty of others spend their first year miserable and trapped, then never come back to trucking — and the industry loses good people that way every year.

We're not telling you never to take company-sponsored training. For some people — particularly those with no savings, no other path, and a strong genuine fit with a specific carrier — it can be the right move. What we're telling you is: read the contract carefully, talk to current drivers at that carrier (not the recruiter), and understand exactly what you're trading before you sign.

The phrase "no money down" doesn't mean "no cost." The cost is your flexibility in the year when flexibility matters most.

## WHAT THIS MEANS FOR YOUR DECISION

The money question doesn't have a single answer, because trucking doesn't have a single job. What it does have is a clear pattern — drivers who choose carefully in year one tend to do well long-term, and drivers who choose under pressure (financial pressure, time pressure, contract pressure) tend to struggle.

Get the cost of training handled before you start — use the programs designed for this. Then choose your first job based on what's actually best for you, not on which carrier got you here.

Next, we'll talk about what those first-job choices actually look like.

### TAKE FROM THIS CHECKPOINT

## THE MONEY — RECAP

- Year-one pay across lanes runs \$45K to \$70K. The "up to" numbers recruiters quote are typically 20–30% above what actually lands in your bank.
- Specialized freight pays best across the board. It also requires more experience, more training, and more responsibility — so it's a destination, not a starting point.
- How drivers get paid (CPM, hourly, salary, percentage) shapes your paycheck more than the headline rate. Per-mile pay rewards miles. Hourly rewards everything else.
- "Free training" is almost never actually free. The contract you sign is the real cost. Read every line before you commit.
- Most schools cost between \$4,000 and \$8,000. Financial aid options vary by state and situation — WIOA, Michigan Works, the VA, TAA, and direct loans all open doors.

*Next: where this career can actually go.*

CHECKPOINT 03

CHECKPOINT 03

# THE CAREER PATHS

---

Most people who think about trucking picture one job — somebody driving a big rig down the highway. The reality is that trucking is more like a family of careers that happen to share the same license.

**M**ost people who think about trucking picture one job — somebody driving a big rig down the highway. The reality is that trucking is more like a family of careers that happen to share the same license. There are dozens of distinct paths inside it, each with its own pay structure, schedule, skill demands, and lifestyle, and the difference between any two of them can be bigger than the difference between trucking and a completely different industry.

What we're going to do in this checkpoint is map out the main paths so you can see the full menu. Most new drivers pick a starting point based on what they happen to see in a recruiting ad, and most of them end up in something different a year or two later. Knowing the full map now means you can choose your first job with the long game in mind.

Your first job isn't your last — it's just where you start.

## THE MAP: PAY VS. HOME TIME

Almost every trucking job trades one thing for another, and the two biggest variables are pay potential and home time. They usually move in opposite directions.

Jobs that pay the most tend to require you to be away the most — OTR, hazmat, heavy haul, some specialized freight. Jobs that get you home every night tend to pay less, or require more years of experience to land. The middle of the map — regional, dedicated, some specialized — is where most drivers eventually settle once they've earned options.

Here's the rough picture:

Path	Home Time	Pay Potential	Experience Needed
OTR (Over-the-Road)	Days at home, weeks out	Solid to strong	None
Regional	Most weekends	Good	Some preferred
Dedicated routes	Varies, usually predictable	Steady, often strong	Some preferred
Local (day cab)	Home every night	Moderate to good	Usually 1+ year
LTL (Less-than-Truckload)	Often home daily or weekly	Strong	Usually 1+ year
Flatbed	Similar to OTR or regional	Strong	None to some
Tanker	Varies	Strong to very strong	Some, plus endorsement
Hazmat	Varies	Strong	Endorsement plus background
Reefer	Similar to OTR	Solid	None
Heavy haul / oversize	Often weeks out	High	Multiple years
Auto transport	Varies	High	Specialized training
Owner-operator	Whatever you make it	Highest ceiling, highest risk	2–5+ years recommended

The point of this map isn't to tell you which one to pick. It's to show you that the choices are real, and that your first job doesn't lock you into anything if you play it right.

## THE MAIN LANES

### **OTR (Over-the-Road)**

This is where most new drivers start, and there's a reason for that. OTR carriers hire from CDL schools at the highest volume, run the biggest training programs, and have the most jobs available for somebody with a fresh license and no experience. The pay is usually cents-per-mile, the time out is usually two to three weeks at a time, and the equipment is usually whatever the carrier issues you.

The advantage of starting OTR is that it's available to you. The disadvantage is that it's the hardest version of the work, and a lot of new drivers wash out in the first six months because they weren't ready for the lifestyle.

If you start OTR, treat year one as a paid apprenticeship. The goal isn't to get rich — it's to put miles under your belt, build a record, and earn the options that come with experience.

### **Regional**

Regional is the middle ground, and for a lot of drivers it ends up being the long-term home. You're running within a defined territory — a few states, a region, sometimes a single state — and you're home most weekends, sometimes during the week. The pay is usually a little lower than OTR, but the lifestyle is a lot more sustainable.

Some carriers will hire new drivers directly into regional positions, especially in markets where freight is plentiful and competition for drivers is high. Most carriers prefer six months to a year of OTR experience first.

### **Dedicated Routes**

A dedicated route is a contract where one carrier hauls freight exclusively for one shipper — Walmart, Target, a specific manufacturer, a beverage distributor. Drivers on dedicated accounts run the same general lanes, often with predictable schedules and consistent customers.

The upside is predictability. You usually know where you'll be Tuesday, what time you'll get home, and who you'll be talking to at the dock. The downside is that the work can be repetitive, and if you don't like the customer or the route, you're locked into it until you transfer to a different account.

### **Local**

Local drivers are home every night. The trucks are usually day cabs, the routes are familiar, and the work often includes more physical labor — loading, unloading, lift gates, and multiple stops a day.

The catch is that local jobs are usually the hardest type for a brand-new CDL holder to land.

## THE SPECIALIZED PATHS

These are the jobs that require something extra — an endorsement, specialized training, or specific equipment experience. The pay tends to be higher across the board, and the work tends to demand more skill.

**Flatbed** means hauling on open trailers with secured loads — lumber, steel, machinery, building materials. The work is more physical (tarping, chaining, strapping) and weather-exposed, but it pays well and the drivers tend to be a tighter community. Some carriers will hire new flatbed drivers directly out of school with the right training, but most prefer some experience first.

**Tanker** means hauling liquids — fuel, food-grade products, chemicals, milk. It requires the Tanker (N) endorsement, and the skill demand is real because liquid loads shift in transit and handle differently than dry freight. The pay reflects that skill.

**Hazmat** means hauling hazardous materials, which requires the Hazmat (H) endorsement, a TSA background check, and a clean record. Hazmat freight pays more across the board, and the X endorsement (Hazmat plus Tanker combined) opens doors to some of the highest-paying entry-level work in the industry.

**Reefer (Refrigerated)** means hauling temperature-controlled freight — produce, frozen goods, pharmaceuticals. The work itself is similar to OTR dry van, but you're also managing the refrigeration unit and dealing with the additional time pressure of perishable freight. Pay is usually a bit higher than dry van.

**Heavy Haul and Oversize** means hauling loads that exceed standard size or weight limits — wind turbine blades, transformers, construction equipment, modular buildings. The pay is high, the equipment is specialized, and the planning required for each load is real. This almost always requires multiple years of experience and dedicated training before you can run it.

**Auto Transport** means hauling cars on multi-vehicle trailers. The work involves loading and unloading cars, navigating tight spaces, and dealing with high-value cargo. Pay is strong, the entry barrier is real (specialized training and equipment skill), and the work suits drivers who care about precision.

**Other specialized work.** There are corners of trucking that pay extremely well but require specific training and experience — livestock haulers, doubles and triples (multiple trailers), fuel haulers, ammunition haulers, and others. They're worth knowing about as career destinations, even if they're not first-job options.

## THE OWNER-OPERATOR PATH

At some point, most drivers consider buying or leasing their own truck and going independent. This is the highest-ceiling path in trucking, and it's also the one with the most ways to go wrong. We won't go deep on it here — that's a whole separate guide — but here are the things you need to know before this becomes a decision you're seriously considering.

**Gross is not net.** An owner-operator might gross \$250,000 in a year, which sounds great until you subtract fuel (\$60,000 to \$90,000), truck payment or maintenance (\$20,000 to \$40,000), insurance (\$10,000 to \$15,000), permits, licenses, tires, repairs, taxes, and accounting. The net for a well-run small business is often \$80,000 to \$120,000 — strong money, but not the "\$250,000 truck driver" the recruiting ads suggest.

**Year three is the earliest most drivers should consider it.** Going independent without experience, savings, and a strong understanding of the business side is the fastest way to lose a truck. Most drivers who succeed as owner-operators built up two to five years of company driving experience first, often with a deliberate plan to learn the business side along the way.

**Watch out for lease-purchase programs.** This is the version of owner-operator the big carriers push on new drivers, and it deserves its own warning. A lease-purchase deal lets you "buy" a truck from your carrier with weekly payments deducted from your settlement. On paper, you're working toward ownership. In practice, the trucks are often overpriced, the maintenance costs are often passed to you while the carrier still controls the truck, and the contracts are often structured so that quitting means walking away with nothing. Drivers who try lease-purchase as their entry into owner-operator status often end up worse off than if they'd stayed company drivers.

If becoming an owner-operator is your goal, there's a real path to get there — and that path almost never starts with a lease-purchase program in your first year. We'll dig into the business side in a future resource. For now, just know it exists, and know what to avoid.

## HOW DRIVERS ACTUALLY MOVE THROUGH THESE

Almost no career driver stays in their first job forever. Here's the rough pattern.

**Year one** is usually OTR with a mega-carrier or mid-size carrier. The goal is miles, experience, and a clean record.

**Year two** is when most drivers move — often to regional, to a better OTR carrier, or into a specialized lane they trained for. Pay typically jumps in this transition because you're no longer "new."

**Years three through five** are when career drivers settle into the path that suits their life — local work for the home-every-night crowd, LTL for steady pay and decent home time, specialized freight for higher money, dedicated for predictability.

**Year five and beyond** is when some drivers go owner-operator with a real plan, while others stay in their preferred company-driver lane indefinitely. Both are legitimate long-term paths, and neither is a step backward.

The point is that your first job doesn't decide your career — it just decides your starting line. Pick a starting line that gives you options when year two rolls around, and you'll have control of where this goes.

## WHAT THIS MEANS FOR YOUR DECISION

Knowing the full map matters because the school you choose can either open these doors for you or quietly close some of them.

A program that trains you only on automatic transmissions, for example, restricts your license and locks you out of a lot of the highest-paying jobs — manual transmission is still required for plenty of OTR, regional, flatbed, and specialized work. A program that doesn't include hands-on coupling, backing, or pre-trip practice is going to leave you weaker on test day and weaker in the cab when you start.

The next checkpoint is where this gets concrete. We'll walk through how to actually choose a school, what to ask, what to watch for, and what the real difference is between schools that get you a license and schools that get you ready for the work.

### TAKE FROM THIS CHECKPOINT

## THE CAREER PATHS — RECAP

- Pay and home time are usually inversely related — more of one means less of the other. Specialized lanes are the exception.
- OTR is where most new drivers start. Regional and dedicated are where most settle within their first two years.
- Specialized work (tanker, hazmat, heavy haul, auto transport) pays best but requires experience and additional credentials. It rewards patience.
- Owner-operator looks attractive on paper. The drivers who succeed treat it as a business, not a status symbol — and most don't make the jump until year three or beyond.
- Most drivers will work two or three different lanes over a 10-year career. The lane you start in shapes your options more than it defines your destination.

*Next: how to pick a school that won't waste your time.*

---

*Pay potential ranges in this checkpoint are based on the same 2026 industry data referenced in Checkpoint 2. See that checkpoint's Sources & References for details.*

CHECKPOINT 04

CHECKPOINT 04

# THE TRAINING DECISION

---

We saved the most important checkpoint for the middle of the guide for a reason. The school you choose is the single biggest variable in how your trucking career starts, and a bad choice here can cost you in ways that take years to undo.

**W**e saved the most important checkpoint for the middle of the guide for a reason. The school you choose is the single biggest variable in how your trucking career starts, and a bad choice here can cost you in ways that take years to undo.

Most people pick a CDL school the same way they pick a restaurant — they Google a few options, look at the reviews, and pick whichever one feels right. That's a fine way to pick a restaurant, but a terrible way to pick a training program that's going to determine your career trajectory for the next several years.

What we're going to do in this checkpoint is give you a real framework for evaluating any school — the questions to ask, the warning signs to spot, and the federal standard every school has to meet before it can even legally train you.

## ELDT: THE FLOOR, NOT THE CEILING

Since February 2022, every CDL applicant in the United States has been required to complete Entry-Level Driver Training (ELDT) from a registered training provider before they can take the CDL skills test. This is federal law, and there are no exceptions or workarounds.

ELDT covers both theory training (the classroom portion) and behind-the-wheel training (the practical portion). Every school that legally trains CDL applicants for a new license must be listed on the FMCSA Training Provider Registry — usually shortened to "the TPR." If a school can't show you their listing, they can't legally train you. That's a hard line.

The first question you should ask any school you're considering is whether they're on the Training Provider Registry. If the answer is yes, ask for their provider number so you can verify it yourself at [tpr.fmcsa.dot.gov](https://tpr.fmcsa.dot.gov). If the answer is anything other than yes, walk away.

But here's the thing — being on the TPR is the floor, not the ceiling. ELDT compliance means a school meets the minimum federal standard, which is real but limited. It doesn't tell you anything about the quality of their equipment, the experience of their instructors, the student-to-instructor ratio, or whether they'll actually prepare you for the job. A lot of bad schools are TPR-listed. The TPR just means they're legal, not that they're good.

The rest of this checkpoint is about the difference between a legal school and a good one.

## PRIVATE SCHOOL VS. COMPANY-SPONSORED: TWO DIFFERENT BARGAINS

We covered the contract side of company-sponsored training back in Checkpoint 2 — the pro-rated payback, the lock-in to a single carrier, the loss of flexibility in year one. Now let's look at it from the training quality angle.

A private CDL school is in the business of training drivers. Their reputation, their job placement numbers, and their ability to recruit new students all depend on producing drivers who can pass the test and succeed in the cab. That alignment matters, because the school's interests and your interests point in roughly the same direction.

A company-sponsored school is in the business of putting drivers in their own trucks as fast as possible. Their training programs tend to be shorter, narrower, and focused specifically on what their own carrier needs. The equipment you train on is the equipment they want you to drive — which often means automatic transmissions, specific trailer types, and procedures that only apply at that carrier. You finish the program prepared to work for them, and not necessarily prepared for the broader industry.

This isn't an accusation of bad faith. Company-sponsored schools do real training, and many drivers get their start that way. But the structural incentives are different, and you should understand what those incentives mean for the kind of driver you become.

The simple version: a private school trains you to be a driver, and a company-sponsored school trains you to be their driver. Those are two different things, and which one is right for you depends on whether you've already decided you want to work for that specific carrier for at least the length of their contract.

## RED FLAGS IN A CDL SCHOOL

Here's what to walk away from.

**Tuition under \$2,000 for a full Class A program.** A legitimate ELDT-compliant Class A program in 2026 has real costs — instructors, fuel, truck maintenance, insurance, facility overhead. Anything advertised under \$2,000 is almost certainly cutting something critical, whether it's instructor time, behind-the-wheel hours, or actual legal compliance.

**Automatic-only training.** If a school only trains on automatic transmissions, your CDL will come with a restriction that locks you out of any manual-transmission job. That includes a lot of OTR, regional, flatbed, and specialized work — exactly the kind of jobs that pay well and matter for your career.

**Single-carrier partnerships that lock you in.** If the school requires you to commit to working for a specific carrier in exchange for the training, you're not at a school — you're at a recruiting funnel.

**Student-to-instructor ratios above 10:1.** High ratios mean less behind-the-wheel time per student, which means weaker training and a harder test. A ratio of 4:1 to 6:1 is much closer to what good training actually looks like.

**Refusal to disclose pass rates or job placement numbers.** Good schools track these and share them. Schools that won't are usually hiding something.

**Refusal to let you talk to current students.** This is one of the cleanest tests of a school's confidence in what they do. If they won't let you talk to people actually in the program, ask yourself why.

**Aggressive sales tactics, signing pressure, or "today only" offers.** Real schools don't need to pressure you into enrolling. If you're being rushed, slow down.

**Equipment that looks worse than what's parked at a junkyard.** You'll be learning on this equipment, and if it looks unsafe to drive, it probably is.

## GREEN FLAGS IN A CDL SCHOOL

Here's what to actively look for.

**Listed on the FMCSA Training Provider Registry, with a provider number they'll give you on request.**

**Manual transmission training included or available.** Even if you plan to drive automatic, getting the unrestricted CDL keeps every door open. A school that defaults to manual is a school that takes the long game seriously.

**Low student-to-instructor ratio.** Ask the number directly — a 4:1 or 5:1 ratio means real one-on-one time, while anything higher than 8:1 starts to dilute the training meaningfully.

**Modern, maintained equipment.** You're looking for trucks that look like working trucks — not display pieces and not junkers. You don't need brand-new equipment, but you need equipment you'd be comfortable being inspected in.

**Transparent pricing.** Every cost should be disclosed up front, with no surprise fees added after enrollment. A school willing to put the all-in number on paper is a school you can trust to behave the same way once you've signed.

**Multiple financial aid options accepted.** Schools that accept WIOA, VA benefits, Michigan Works, MRS, TAA, and other funding sources are signaling that they want students from a wide range of backgrounds and that they've done the work to qualify with those programs.

**Job placement assistance that doesn't require a contract.** Help getting hired is good — being forced to work for a specific carrier in exchange for training is not.

**Diverse carrier relationships.** Schools that bring in multiple recruiters and carriers — different sizes, different freight types, different territories — give you more options when it's time to choose your first job. Schools that only work with one or two carriers limit your future.

**Reasonable program length.** A full Class A program is typically three to four weeks of full-time training. Significantly shorter than that usually means corners are being cut, and significantly longer without a clear reason usually means inefficiency.

At MTDS, we built our program around most of what's on this list. That's not because we're trying to convince you to come here — it's because we've been around long enough to know what separates schools that produce real drivers from schools that produce drivers with licenses. The criteria above describe the kind of school we wish every student had access to, regardless of where they end up.

## THE 10 QUESTIONS TO ASK ANY SCHOOL

When you're talking to a school, these are the questions that will tell you the most about whether they're worth your time. Ask all of them, and take notes on the answers.

- 1. Are you on the FMCSA Training Provider Registry? What's your provider number?** This is the legal floor — if they can't answer or won't share the number, the conversation is over.
- 2. What's your student-to-instructor ratio in behind-the-wheel training?** Lower is better, and anything above 10:1 is a problem.
- 3. How many hours of actual behind-the-wheel time will I get?** ELDT requires a minimum, but good programs exceed it. Ask for the specific number, not a vague range.
- 4. Do you train on manual transmission, or only automatic?** Manual training keeps your CDL unrestricted and your options open.
- 5. What's the all-in cost — tuition, fees, books, testing, everything?** Get the full number in writing — hidden fees added after enrollment are a classic bad-school tactic.
- 6. What's your first-attempt pass rate?** Good schools track this and share it. If they won't share it, they're either not tracking it or not proud of it.
- 7. What financial aid do you accept?** The more options they accept, the better. Ask specifically about WIOA, VA, state workforce programs, and any others you might qualify for.
- 8. Can I talk to current students or recent graduates?** The answer should be yes, and if it isn't, ask why.
- 9. Do you require me to work for any specific carrier or pay back tuition if I don't?** This separates schools from recruiting funnels.
- 10. What happens if I don't pass the test the first time?** Good schools include at least one retake in tuition. Schools that charge full price for every attempt are signaling that they expect you to fail.

## COMMON TACTICS TO WATCH FOR

A few patterns show up over and over in the recruiting side of this industry, and they're worth recognizing before you sit down with anyone.

**"Free training" that isn't free.** We covered this in Checkpoint 2 — the cost is the contract.

**"Guaranteed pass" marketing.** Nobody can guarantee you'll pass a state-administered exam. Schools that promise this are either lying or operating in a way that suggests they're cooking results.

**Sign-on bonuses bundled into enrollment offers.** Some schools partner with carriers who offer sign-on bonuses to graduates, and the school sometimes treats those bonuses as part of "the value" of the program. Sign-on bonuses come with their own strings (covered in Checkpoint 2) and shouldn't factor into your school choice.

**Pressure to enroll today.** "If you sign today, we can hold your spot for the next class." Real schools don't run their enrollment like a used car lot. If you need a day to think about it, take it.

**Vague answers to specific questions.** If you ask about pass rates and get a story about graduates instead of a number, you're being managed — push back.

## WHAT THIS MEANS FOR YOUR DECISION

The training decision is the single most leveraged choice you'll make in this whole process. A good school makes everything that comes after it easier — better job options, better starting pay, better preparation for the actual work. A bad school makes everything harder, and you'll spend your first year on the road compensating for what you didn't learn.

Don't pick the cheapest one, the closest one, or the one with the slickest website. Pick the one that answers all ten of the questions above without hesitation and treats you like an adult who's making a real decision.

If you find one, you've found the right place to start.

Next, we'll talk about the license itself — what classes and endorsements actually mean, what disqualifies you, and what the DOT physical is really checking for.

### TAKE FROM THIS CHECKPOINT

## THE TRAINING DECISION — RECAP

- ELDT is the legal floor for CDL training. A school being on the FMCSA Training Provider Registry is the baseline — not a sign of quality.
- Private school costs money upfront but leaves you free. Company-sponsored is free upfront but locks you into a contract that's hard to escape.
- Red flags: high-pressure sales tactics, unclear costs, no equipment to see, no current students to talk to, and recruiters who can't answer specific questions.
- Green flags: transparent pricing, real equipment in use, low instructor-to-student ratios, modern simulators, and current students who'll talk candidly.
- We built our program around all of this. You should hold every school — including us — to the same standard.

*Next: the paperwork side of the credential.*

CHECKPOINT 05

CHECKPOINT 05

# THE CREDENTIALS

---

The credential side of CDL careers is one of the few places where the information is mostly black and white. Either you can pass a DOT physical or you can't, either your record qualifies you to drive or it doesn't, and either you have the endorsement that pays more or you have to test for it.

**T**he credential side of CDL careers is one of the few places where the information is mostly black and white. Either you can pass a DOT physical or you can't, either your record qualifies you to drive or it doesn't, and either you have the endorsement that pays more or you have to test for it.

This checkpoint walks through what those credentials actually are, what each one requires, and what — honestly — could disqualify you from any of them. We're not going to soft-pedal this part. If something in your medical history, your record, or your background is going to be a problem, it's better to know now than to find out after you've paid tuition.

## CDL CLASSES

There are three classes of commercial driver's license, and which one you need depends on the vehicle you're going to drive.

**Class A.** This is the big one — combination vehicles with a gross weight rating over 26,001 pounds and a trailer rated above 10,000 pounds. In plain English, this is the license for tractor-trailer rigs, the eighteen-wheelers you see on the highway. A Class A also lets you operate anything below it, which is why most CDL programs train for Class A by default — it's the most versatile license you can get.

**Class B.** Single vehicles rated over 26,001 pounds, or those towing a trailer under 10,000 pounds. Dump trucks, straight trucks, larger buses, garbage trucks, and certain box trucks all fall under Class B. Class B doesn't let you drive a tractor-trailer rig, but it does cover a wide range of local and regional jobs.

**Class C.** Smaller commercial vehicles that don't meet Class A or B weight thresholds but still require a CDL — typically passenger vehicles designed to carry sixteen or more people (including the driver), or vehicles transporting hazardous materials in quantities requiring placards.

Most people in trucking pursue Class A because it opens the widest range of jobs. If your goal is local bus driving or a specific Class B job, you can train directly for that — but unless you have a very specific reason to limit yourself, Class A is the right starting point.

## ENDORSEMENTS

Endorsements are add-ons to your CDL that let you operate specific types of vehicles or haul specific types of freight. Some you'll never need, and a few are worth real money.

The ones that exist:

**H — Hazmat.** Hauling hazardous materials. Requires a separate written exam and a TSA background check (around \$86 plus state fees). Adds meaningful money to your paycheck and opens doors to dedicated hazmat freight.

**N — Tanker.** Hauling liquids. Requires a separate written exam, but no background check. Tanker freight pays well because the work is harder — liquid loads shift in transit and demand real skill.

**T — Doubles and Triples.** Pulling multiple trailers. Required for certain LTL and specialized work. Written exam only.

**P — Passenger.** Required for any bus or vehicle carrying sixteen or more passengers. Most common for bus drivers and shuttle drivers.

**S — School Bus.** Required for any school bus, plus a state-administered background check and additional requirements. Usually paired with the P endorsement.

**X — The Combination.** This isn't a separate endorsement test — it's what you have when you hold both Hazmat (H) and Tanker (N). The combination opens doors to fuel hauling, chemical transport, and some of the highest-paying entry-level work in the industry.

If you're planning to drive truck long-term, the X combination is one of the best returns on a few hundred dollars of test fees and study time. The pay difference adds up to thousands per year over a career.

## RESTRICTIONS

You also need to know what restrictions can show up on your CDL. These don't add capabilities — they take them away.

**E — No manual transmission.** You tested on an automatic, so your license only lets you drive automatics. This is the most common restriction, and it locks you out of a meaningful chunk of higher-paying work.

**L — No air brakes.** You tested on a vehicle without air brakes, so you can't operate one. This locks you out of most over-the-road work.

**O — No tractor-trailer.** Limits you to straight trucks.

**Z — No full air brake.** Limits which air brake systems you can operate.

The way you avoid restrictions is by testing on the right equipment. Make sure your school trains on manual transmission with full air brakes if you want a clean, unrestricted Class A.

## THE DOT PHYSICAL

Every CDL holder needs a current DOT medical card, and you can't get one without passing a physical exam from a certified medical examiner. The exam is the same nationwide — it's the federal government's way of making sure the person behind the wheel is medically fit to drive a 40-ton vehicle.

Here's what the physical actually checks:

**Vision.** You need 20/40 vision in each eye, with or without correction, and at least 70 degrees of peripheral vision. You also need to be able to distinguish the standard colors used in traffic signals.

**Hearing.** Either a "forced whisper test" at 5 feet, or an audiometric test confirming you can hear within standard ranges.

**Blood pressure.** For an unrestricted two-year medical card, you generally need to be below 140/90. Higher numbers can still qualify you, but with a shorter card and follow-up requirements.

**Urinalysis.** A urine test looking for sugar, protein, or blood — indicators of underlying conditions that might affect your fitness to drive.

**General physical.** Heart, lungs, neurological function, range of motion, and an overall fitness check.

**Medical history.** A detailed conversation about any conditions, medications, or recent surgeries.

Your medical card is valid for up to 24 months, sometimes less if you have a condition that requires more frequent monitoring.

### What Disqualifies You

Some conditions and medications can make passing the DOT physical harder or impossible. The big ones to know about:

- Uncontrolled diabetes, especially if you require insulin and don't have a stable management plan
- Sleep apnea that isn't being treated
- Heart conditions with a high event risk
- Certain seizure disorders
- Vision or hearing below the standards above
- Loss of a limb without an approved Skill Performance Evaluation waiver
- Certain medications — opioids, benzodiazepines, methadone, some anti-anxiety drugs, and others depending on dosage and use

The biggest surprise for a lot of drivers is sleep apnea. The DOT physical includes screening for risk factors like neck size, BMI, and snoring history, and drivers who fit the risk profile may be required to complete a sleep study before getting certified. Sleep apnea itself isn't

## DRUG TESTING

Federal CDL drug testing is one of the most consistently misunderstood parts of starting in trucking, and there are a few things to know up front.

You will be tested at pre-employment, randomly throughout your career, after any accident, after any return-to-duty event, and on a follow-up schedule if a violation occurs. The DOT runs a national database called the Drug and Alcohol Clearinghouse that tracks every violation across every carrier. If you've been flagged at one carrier, every other carrier sees it.

**On marijuana.** This is the part that surprises the most people. Marijuana is federally illegal as a Schedule I drug, and the DOT explicitly prohibits its use by CDL holders regardless of state law. It doesn't matter if your state has legalized recreational use, it doesn't matter if you have a medical card, and it doesn't matter if you used it on your day off three weeks ago. THC stays detectable for weeks, and a positive test on a federal panel is a violation.

CBD products are also a risk, because they can contain trace amounts of THC that trigger positive tests. There's no regulated quality control on CBD products the way there is for pharmaceuticals, so even "THC-free" products can fail you.

If marijuana is part of your current life and you're not willing to stop, this career is not going to work. There's no path around this, and there's no carrier willing to look the other way. The federal program is the federal program.

## YOUR DRIVING RECORD

Your motor vehicle record (MVR) tells carriers what you've done behind the wheel. They pull it before they hire you, and they pull it on a recurring schedule throughout your employment.

Most carriers are looking for:

**No DUI in the last 5 to 10 years.** Some carriers won't hire drivers with a DUI ever, others will after a defined waiting period, and in general, the longer ago it was the more options you have.

**No more than one or two minor moving violations in the last three years.** Speeding tickets, lane violations, equipment violations — minor on their own, but they add up.

**No reckless driving convictions.** This is a hard line at most carriers.

**No accidents involving fatality or serious injury.** Even if you weren't at fault, certain accidents can show up in ways that make hiring harder.

**No license suspensions or revocations in recent years.** A suspension shows a pattern carriers don't want.

If your record has issues, you still have options — they just narrow significantly. Some carriers specialize in hiring drivers with imperfect records, typically for less desirable lanes and lower pay. The path back is to build clean driving time, year over year, until carriers with stricter standards start opening up.

## CRIMINAL BACKGROUND

The biggest myth in CDL careers is the belief that any felony automatically disqualifies you from driving truck — in reality, the picture is much more nuanced. Most carriers will run a criminal background check, and how they handle what they find varies widely. Some won't hire anyone with a felony in the last 7 years, while others have specific exclusions (violent crimes, drug trafficking, fraud) but accept many felony histories. A lot of carriers care more about how recent the offense was and whether you've stayed clean since.

The Hazmat endorsement is a different story. To get the H endorsement, you have to pass a TSA background check that specifically screens for certain disqualifying offenses — drug trafficking, certain violent crimes, terrorism-related offenses, and a defined list of others. If you have one of those in your history, Hazmat isn't going to be a path that's open to you.

If you have a criminal history you're concerned about, the honest answer is that it depends on what it is, how long ago it was, and which carriers you approach. Talk to your school's job placement team about it before you start training — they'll know which carriers will work with you and which won't.

## WHAT THIS MEANS FOR YOUR DECISION

The credential side of trucking can feel like a maze, but it's actually one of the more predictable parts of this career. Either you meet the standards or you don't, and either way, you can find out before you spend money on training.

If you have any concerns about a condition, a medication, or your record, get them checked before you enroll anywhere. A 20-minute conversation with a DOT medical examiner or an honest school admissions team can save you from a much harder conversation later.

Next, we'll walk through what to expect in your first year on the road — the carriers, the contracts, the watch-outs, and how to set yourself up for year two.

### TAKE FROM THIS CHECKPOINT

## THE CREDENTIALS — RECAP

- Class A is the most flexible CDL — it covers everything Class B and Class C do, plus combination vehicles. Start here unless you have a specific reason not to.
- Endorsements expand your options. Hazmat (H), Tanker (N), and Doubles/Triples (T) each unlock specific lanes and usually a small pay premium.
- The DOT physical is the medical gate. Vision, hearing, blood pressure, sleep apnea, and a few other things get checked. Most disqualifications are manageable with the right preparation.
- Drug testing is federal. THC is still disqualifying everywhere, even in legal states. CBD products can trigger positives — don't risk it.
- Your driving record and criminal history matter. Most schools and carriers will tell you up front whether your situation works. Ask before you enroll.

*Next: what happens after you have the license.*

CHECKPOINT 06

CHECKPOINT 06

# THE FIRST YEAR

---

If the school decision is the single most leveraged choice you'll make before you start, the first year is where that decision pays off — or doesn't. Year one is when you build the record, learn the rhythms, figure out which kind of trucking actually suits you, and earn the experience that opens better doors in year two.

If the school decision is the single most leveraged choice you'll make before you start, the first year is where that decision pays off — or doesn't. Year one is when you build the record, learn the rhythms, figure out which kind of trucking actually suits you, and earn the experience that opens better doors in year two.

It's also when most drivers who leave the industry decide to leave. The first year is hard, and a lot of new drivers wash out not because they're bad at the work but because they signed up for something different than what they got — or because they didn't know what was coming.

This checkpoint walks you through what to expect month by month, what to watch for in carrier offers, and how to set yourself up so that year two starts from a position of strength.

## THE FIRST 90 DAYS: WHAT ACTUALLY HAPPENS

Most new drivers don't realize that graduating CDL school doesn't mean you go straight to driving your own truck. There's another step in between, and it varies a lot by carrier.

### **The Finishing Program**

When you get hired at most carriers, the first thing that happens is a multi-week "finishing program" — sometimes called orientation, driver training, or just "going out with a trainer." During this period, you ride in a sleeper truck with a more experienced driver, usually running team. One of you drives while the other sleeps, and you switch.

The finishing program typically runs four to eight weeks depending on the carrier. You're paid during this time, but usually less than you'll make once you're upgraded to your own truck — often a flat weekly stipend or a reduced cents-per-mile rate. The point of the program is to put miles under your belt with somebody watching, build your confidence in real-world conditions, and let the carrier confirm you can actually do the work before they hand you a truck.

The quality of this experience depends almost entirely on the trainer you get. A good trainer treats it like teaching and genuinely tries to set you up for success. A bad trainer treats you like a free pair of hands, lets you run all the night shifts, and barely says a word for six weeks. You won't know which one you got until you're in the truck, but you can ask in your interview whether you get to meet the trainer beforehand and whether trainers are screened for teaching ability.

### **Upgrade and Going Solo**

Once the trainer signs off, you "upgrade" — meaning the carrier assigns you a truck and you start running solo. Your pay rate goes up, your responsibility goes up, and the lifestyle shifts hard. You're now alone in the truck, making your own decisions about where to park and when to break, and the support network you had during training shrinks to a phone call to your dispatcher.

The first solo month is when a lot of new drivers hit a wall. The lifestyle gets real, the loneliness gets real, and the realization that this is your job now — not a training program — hits all at once. This is the part of the first year where it pays to have done the lifestyle thinking back in Checkpoint 1. Drivers who walked in with realistic expectations tend to get through this phase, while drivers who imagined something different tend to struggle.

## CARRIER TYPES: WHO ACTUALLY HIRES NEW DRIVERS

Not every carrier will hire a brand-new CDL holder. The ones that do generally fall into three categories, and they each come with different tradeoffs.

**Mega-carriers** are the big national fleets — the names you see on every other truck on the highway. They hire new drivers at the highest volume, run the biggest training programs, and have the most consistent freight. The upside is that getting hired is straightforward and the structure is predictable. The downsides are that pay tends to start lower, turnover is high, equipment can be inconsistent, and you'll often feel like a number rather than a name.

**Mid-size carriers** run regional or specialized operations, usually a few hundred trucks to a few thousand. They hire new drivers more selectively but often pay better, treat drivers more like individuals, and have more stable operations. The catch is that you often need to be where they operate, and the application process can be slower.

**Small fleets** — operations with under 100 trucks — sometimes hire new drivers, particularly in markets where they need bodies and the big carriers aren't a fit for local freight. Small fleets can be exceptional places to start if you find the right one. They can also be a mess if you don't, because the protections that come with being part of a larger operation don't exist at small fleets. Due diligence matters more here than anywhere else.

Where you start shapes year two more than most new drivers realize. Drivers who start with a strong mid-size or small fleet often build relationships and reputation that compound. Drivers who start at a mega often spend year one running freight and earning a paycheck, then move to a better situation in year two. Both paths work — the key is to pick the one that fits your situation and your patience.

## WATCH-OUTS IN THE FIRST YEAR

There are a few specific traps that catch new drivers more than anything else in year one, and knowing what they look like is how you avoid them.

### **1099 Misclassification**

Some carriers classify new drivers as independent contractors instead of employees, paying them on a 1099 instead of a W-2. On paper, this can look attractive because the gross pay number is sometimes higher. In practice, it shifts every cost and tax burden onto you, eliminates federal protections that come with being an employee, and often results in lower take-home pay once you account for self-employment tax (currently 15.3%), the lack of unemployment coverage, and the lack of employer-provided benefits.

For most drivers, especially new ones, 1099 status is also legally questionable. If the carrier controls your schedule, your routes, and your equipment, you're functionally an employee — and the IRS and Department of Labor have rules about that. If a carrier offers you a 1099 deal as a new driver, get more information before signing anything, and consider whether the cost is really lower than the W-2 alternative.

### **Lease-Purchase Programs**

We covered this in Checkpoint 3, but it's worth repeating in this context. Lease-purchase is the version of owner-operator that the big carriers push on new drivers, and it's almost never the right move in year one. The math rarely works out the way the recruiter explains it, the contracts are usually structured in favor of the carrier, and you'll be carrying real business risk before you have the experience to manage it. If becoming an owner-operator is your goal, the path almost never starts here.

### **Forced Dispatch**

Some carriers operate on "forced dispatch," which means you accept whatever load they assign you whether it works for you or not. Others allow drivers to refuse a load per week, or to indicate preferences within reason. Forced dispatch isn't automatically bad — predictability has value — but it's something you should know about before you sign on. Ask directly in interviews how dispatch decisions are made.

### **Equipment Issues**

Some carriers maintain their trucks meticulously, and some don't. A driver running a poorly maintained truck spends more time broken down, less time earning, and more time stressed. Ask about the average age of the fleet, the maintenance schedule, and what happens when your truck goes down — the answer tells you a lot.

### **The Dispatcher Relationship**

Your dispatcher is the person who decides what loads you run, when you run them, and how

## THE 10 QUESTIONS TO ASK EVERY RECRUITER

When you're interviewing with a carrier, treat it as a two-way conversation. The carrier is evaluating you, but you're also evaluating them. These are the questions worth asking every time.

- 1. What's the actual starting pay, in cents per mile or in weekly average?** Get a number, not a range — and if they give you a range, ask what the bottom looks like.
- 2. What's your training program structure, and how long is it?** You want to know the length, the pay during training, and whether you'll meet your trainer before you go out with them.
- 3. Am I classified as a W-2 employee or a 1099 contractor?** If 1099, slow down and ask why.
- 4. How are loads assigned? Is this forced dispatch?** You want to understand what control you'll have over your schedule.
- 5. What's the average age of your fleet, and what happens if my truck goes down?** A carrier confident in their equipment will give you a clear answer.
- 6. What's the home time policy, and how often does it actually work out as promised?** "How often" is the important part — ask if they have data.
- 7. How are dispatchers assigned, and what's the process if there's a conflict?** A carrier that's never thought about this is a carrier where drivers don't have a voice.
- 8. What's your year-one retention rate?** Most carriers won't share this, but the question itself sends a signal — carriers proud of their retention will answer, and carriers that aren't will dodge.
- 9. Can I talk to a current driver before I sign?** Same logic as the school question — if the answer is no, ask yourself why.
- 10. What's the path to year two? When can I expect a raise, better routes, or different freight options?** You want to know there's a future, not just a job.

## THE FIRST 30 DAYS: HOW TO SET YOURSELF UP

The first month on the road is where you build the habits that will define your year. A few things worth doing intentionally.

**Document everything.** Keep records of your loads, your hours, your pay statements, and any communication with dispatch. If something goes wrong later — pay disputes, accident documentation, anything — the driver with records has options, and the driver without them doesn't.

**Build a relationship with your dispatcher.** A short, professional phone call when things go well matters more than people realize. Dispatchers prioritize drivers they know, trust, and like, and being easy to work with — calm under pressure, communicative about problems, on time with loads — pays back in better routes and better treatment over the long run.

**Take care of your body.** Truck stop food and a sedentary lifestyle will catch up with you faster than you expect. You don't need to become a gym rat — you just need to walk during breaks, drink water, and get something on your plate that didn't come out of a fryer at least once a day. Small habits, compounded over months, are the difference between a long career and a short one.

**Save aggressively in year one if you can.** Even if you're not making top-tier money, year one is the year to build an emergency fund. A truck breakdown, a family emergency, or a sudden change at the carrier can blow up an unprepared driver, and a small cushion gives you options.

**Watch your record.** Every ticket, every accident, every safety event in year one weighs more than it will in year five. The drivers who keep year one clean have the most options at year two.

## BUILDING TOWARD YEAR TWO

Most drivers think of their first job as the destination, but the drivers who do well in this industry think of it as the launchpad.

Year one is for building three things: miles, a clean record, and relationships. Get to twelve months with all three intact, and the doors that were closed when you walked out of CDL school start opening. Regional positions become realistic, local positions become possible, and specialized freight starts to consider you. Better carriers — the ones that don't hire new CDL holders — will look at your record and your experience and offer you a job.

The single most important thing to remember in year one is that it's temporary. Whatever pay, lifestyle, or carrier you have at month three is not what year five looks like. The drivers who quit during the hard middle of year one rarely come back, while the drivers who push through to month twelve almost always find that the second year is meaningfully different.

## WHAT THIS MEANS FOR YOUR DECISION

The first year is hard, and we're not going to pretend otherwise. But it's also the only year you have to do once, and the way you handle it sets up everything that comes after.

If you've read this checkpoint and the work still sounds like something you want to do, that's a strong signal. You're not walking in blind — you know what to expect, what to watch for, and how to set yourself up.

Next, we'll talk about the day-to-day side: health on the road, family, mental wellbeing, and the practical stuff that makes the lifestyle sustainable.

### TAKE FROM THIS CHECKPOINT

## THE FIRST YEAR — RECAP

- The first 90 days are a finishing program with a trainer — you're not solo yet. This is normal at every carrier.
- Mega-carriers hire new drivers because they have the scale. Smaller carriers are pickier but often better long-term homes.
- Watch for: 1099 misclassification, lease-purchase traps, forced dispatch, and bad equipment. These are the four most common ways new drivers get burned.
- Ask every recruiter the ten questions in this checkpoint before you sign anything. The ones who answer cleanly are the ones worth working for.
- Year one is about survival and learning. Year two is where the career actually starts.

*Next: how to stay healthy and stay married while doing this work.*

CHECKPOINT 07

CHECKPOINT 07

# THE LIFESTYLE TOOLKIT

---

The lifestyle challenges of trucking are real, but most of them have practical solutions. The difference between a driver who thrives in this work and a driver who burns out has less to do with toughness than with planning.

**T**he lifestyle challenges of trucking are real, but most of them have practical solutions. The difference between a driver who thrives in this work and a driver who burns out has less to do with toughness than with planning. The drivers who last figure out — usually through trial and error — how to eat, sleep, stay connected, and stay sane on the road. We're going to skip the trial and error and give you the playbook directly.

This checkpoint covers health on the road, mental wellbeing, family and relationships, and the practical question of what to actually bring with you. None of this is about whether you can handle the work — it's about how to handle it well enough that the work doesn't break you.

## HEALTH ON THE ROAD

The single biggest health risk in trucking is what's easy. It's easy to eat at the truck stop every meal, easy to skip exercise because you're tired, and easy to drink soda all day because it's there. None of these things will kill you in a week, but compound them over months and years and you end up with the health profile that gives long-haul drivers their reputation.

### Eating

The cheapest and most effective move is to bring real food with you. A small cooler or 12-volt refrigerator (under \$200) lets you store a week of pre-prepped meals — cut vegetables, hummus, hard-boiled eggs, fruit, jerky, deli meat, cheese, yogurt. You're not trying to eat like a nutritionist — you're trying to eat like a person who isn't relying on the gas station hot bar three meals a day.

When you do eat at truck stops, the better options are usually right in front of you. Most major chains now carry salads, Subway sandwiches, fruit cups, and rotisserie chicken. Loves and Pilot have made real progress on this in recent years.

Hydration matters more than people think. Water is free, and drinking it instead of soda or coffee for half your day changes how you feel and how you sleep. An insulated water bottle is one of the best investments you can make.

### Sleep

Most factory sleeper mattresses are uncomfortable, and you'll be using one for thousands of hours over the next few years. A real mattress topper — memory foam or hybrid, \$100 to \$300 — is the single most underrated piece of trucking equipment. Drivers who buy one always wish they had bought one sooner.

Beyond the mattress, the basics matter — blackout curtains or a sleep mask for daytime rest, earplugs or a white noise app for the truck stop chaos, and a consistent sleep schedule even when your loads vary, because your body recovers based on rhythm more than total hours.

Avoid sleeping in random rest areas when possible. Truck stops aren't perfect, but they're safer, better-lit, and have facilities. Plan your day around them when you can.

### Exercise

You don't need a gym membership and you don't need to become a serious lifter. What you need is to move regularly enough that you don't lose the ability to do so.

The gateway exercise in trucking is walking. Walk around the truck during every break, walk laps around the truck stop while you wait at a shipper, and aim for thirty minutes on most days. Your body will hold up if you do that consistently.

## MENTAL HEALTH

The mental health side of trucking is the most underdiscussed part of this career, and it's worth being direct about. Long-haul drivers experience higher rates of depression and anxiety than the general population, and the lifestyle creates real risk for self-medication, isolation, and burnout. None of this means trucking is mentally bad for people — it means the people who do it need to actively look after their mental wellbeing, the same way they look after their bodies and their equipment.

The signs to watch for in yourself include persistent low mood, difficulty sleeping even when you have time, loss of interest in things you used to enjoy, increased reliance on alcohol or food to cope, and the feeling that nothing is going to get better. These are warning signs, not character flaws, and they show up more often in year one than in any other year.

What helps:

**Daily voice contact.** Texting is fine, but voices matter — a daily phone call to somebody who knows you, whether a partner, a parent, a friend, or a fellow driver, does more for your mental state than people realize.

**Audio engagement.** Audiobooks, podcasts, music, language lessons — anything that gives your mind something to engage with. The brain that's only running on its own thoughts for ten hours a day gets in trouble.

**Another driver in your phone.** A trucker friend — even one you only know through the road — gives you somebody who actually understands what you're dealing with. CB radio still works for casual contact, and so does a regular phone number.

**Real help when you need it.** If you're struggling, you can talk to a professional. Telehealth therapy is now common and works fine from a truck cab, trucker chaplains exist at most major truck stops, and the 988 Suicide and Crisis Lifeline is available 24/7 by call or text.

Some mental health treatments and medications can affect DOT certification, which is one reason drivers avoid getting help. Talk to a certified DOT medical examiner about your specific situation before you assume the worst. Many conditions and treatments are compatible with CDL operation if handled correctly, and getting help on the front end is almost always better than the alternative.

## FAMILY AND RELATIONSHIPS

The hardest part of OTR trucking for most drivers isn't the work — it's the impact on the people at home. Long absences strain even strong relationships, and the strain is rarely about the absence itself — it's about how each person handles it.

A few things help.

**Make communication intentional, not accidental.** Schedule daily calls instead of "we'll talk when we can." The driver who texts once a day and calls once a week loses connection faster than they realize. Voice is qualitatively different from text, and video is qualitatively different from voice.

**Don't carry the road home, and don't carry home onto the road.** When you're on the phone with your partner, they don't need to hear about every dispatch frustration, and when you're driving, you can't fix what's happening at home. Both of you have your own version of the lifestyle, and both versions are hard — listening matters more than venting on either side.

**Respect what the partner at home is dealing with.** They're doing the equivalent of single parenting whenever you're out, even if the kids are grown. The house, the bills, the calendar, the emergencies — all of it lands on one person while you're gone. Acknowledge that out loud. The drivers who do this thrive at home, while the drivers who don't tend to come back to less than they left.

**Make home time intentional.** Don't waste your first day home recovering on the couch unless that's been agreed to. Plan something with your people before you arrive. It doesn't have to be elaborate — a meal, a walk, a project — but it gives the family time a shape, and it makes both of you remember why you're doing this.

**Look into rider programs.** Many carriers allow drivers to bring a partner along on certain routes for a defined period. It's not a vacation, but it can give your partner a real sense of what your life looks like, and it can be an unexpected reset for the relationship.

## WHAT TO PACK

Most new drivers either over-pack or under-pack, and both create problems. Here's the honest list of what actually matters.

**Sleeping.** A real pillow from home, a good blanket or sleeping bag, a mattress topper, an eye mask, and earplugs. Don't rely on whatever's in the truck.

**Hygiene.** A shower bag (the kind that hangs on a hook), flip-flops for the shower floor, a microfiber towel, a laundry bag, and basic toiletries. Buy small refillable containers and refill from full-size bottles you keep in the truck.

**Food and water.** A cooler or 12-volt fridge, an insulated water bottle, reusable containers for prepped meals, a small electric kettle or hot pot (truck permitting), and a few non-perishable backups for delayed deliveries.

**Clothing.** Enough for two weeks of work, plus a couple of off-duty outfits, good rain gear, layers for variable weather, work gloves, and steel-toe boots if your freight requires them. Don't bring more — laundry is doable on the road.

**Electronics.** A phone charger and a backup, a 12-volt power adapter, a dashcam (optional but worth it), a truck-specific GPS like a Rand McNally or Garmin (built-in nav is rarely good enough for commercial routes), and a paper atlas as backup when you lose signal.

**Documents.** Your medical card, your CDL, your endorsement paperwork, and copies of important contracts, all in a folder you can find quickly — keep one set in the truck and one set with somebody at home.

**Comfort.** A small fan or 12-volt heater if your truck doesn't have great climate control, a favorite mug, books or an e-reader, and at least one thing that makes the cab feel like yours rather than the company's.

**Safety.** A small first aid kit, a flashlight, a multi-tool, jumper cables, and basic emergency supplies for being stranded.

## WHAT YOU DON'T NEED

Most over-packing falls into a few categories.

**Too many clothes.** Two weeks of work clothes is plenty, and laundry exists at every truck stop and at home.

**Bulky entertainment.** A TV setup, a gaming console, a guitar — drivers buy these in year one and rarely use them. You'll have less downtime than you think, and what you do have is better spent on rest, exercise, or contact with people at home.

**A second pair of dress shoes.** Or a third, for that matter — you're not going to need them.

**Heavy tools.** The truck has tools, the carrier has roadside service, and you don't need to try to be your own mechanic.

**Decorative items.** Save it for home — less stuff in the cab means easier organization, easier cleaning, and less weight.

The general rule is: if you wouldn't bring it on a two-week business trip, you probably don't need it on the truck.

## WHAT THIS MEANS FOR YOUR DECISION

The lifestyle of trucking isn't going to change to fit you — it's the same lifestyle whether you handle it well or poorly. What changes is your preparation, your habits, and the systems you build around the work.

The drivers who plan for this — who pack right, eat right, sleep right, stay connected, and watch their mental wellbeing — find that the lifestyle becomes sustainable. The drivers who don't usually burn out within a year or two and blame the job for what was really a lack of preparation.

We've covered most of what would make somebody fail at this work. Next, we'll talk about the things people say about trucking that aren't quite true — the myths, the misconceptions, and the corrections worth knowing.

### TAKE FROM THIS CHECKPOINT

## THE LIFESTYLE TOOLKIT — RECAP

- Truck stop food is mostly fried. Drivers who manage their eating tend to manage their long-term health better than those who don't.
- Sleep in the truck is rarely as good as sleep at home. Sleep hygiene matters more in this job than in most.
- Daily movement is non-negotiable. The drivers who exercise even minimally tend to last longer in the career than those who don't.
- Mental health is real. Long stretches alone can amplify whatever you bring with you. Have a plan, talk to people, use the 988 line if you need it.
- Family conversations need to happen before you take the job, not after. The drivers who do this well treat their home time as sacred.

*Next: clearing up the eight things people get wrong about this work.*

## CHECKPOINT 08

# THE MYTH AUDIT

---

A lot of what people "know" about trucking comes from somewhere other than people who actually drive trucks. It comes from movies, from old TV shows, from a brother-in-law who knew a guy in the eighties, from social media doom-scrolling, from headlines designed to grab attention rather than convey information.

**A** lot of what people "know" about trucking comes from somewhere other than people who actually drive trucks. It comes from movies, from old TV shows, from a brother-in-law who knew a guy in the eighties, from social media doom-scrolling, from headlines designed to grab attention rather than convey information. Some of what's out there is true, and a lot of it isn't.

This checkpoint walks through eight of the most common misconceptions about trucking — the ones that show up most often in conversations with people considering the career, the ones that stop people from pursuing it, and the ones that show up in your own head when you start to doubt the decision. For each one, we'll name the myth, name why people believe it, and then tell you what's actually true.

**Myth 1: "Self-driving trucks will take my job in five years."**

This one comes from a decade of headlines promising autonomous trucks were just around the corner. Tech companies kept saying it, industry analysts kept repeating it, and on the surface, the technology has advanced significantly — there are now real autonomous trucks running real freight on certain highway routes.

What's true is that autonomous technology is here in limited applications, but what's not true is that it's coming for the broader trucking job market in anything like a five-year window. The current technology handles highway middle-mile freight in good weather under controlled conditions. It doesn't handle first-mile and last-mile complexity — backing into a tight dock at a Walmart distribution center, navigating snow-covered roads in northern Michigan, or making time-sensitive judgment calls when a load doesn't fit the original plan.

Industry projections consistently push the timeline for broad autonomous replacement out to the 2040s and beyond, and even then, the consensus is that human drivers will remain essential for the parts of the job that automation handles poorly. A driver starting today is making a multi-decade career bet, and the data so far doesn't support the panic.

**Myth 2: "Trucking is for people who couldn't do anything else."**

This is one of the more insulting myths, and one of the most outdated. The reality is that trucking attracts people from every background — military veterans, former white-collar professionals, college graduates who decided the office life wasn't for them, skilled tradespeople who wanted to see the country, and people from every demographic in between.

The drivers who do best in this career tend to share certain traits: self-direction, mechanical curiosity, comfort with solitude, and a willingness to work hard. Those traits show up across all kinds of backgrounds and education levels, and none of them suggest "couldn't do anything else."

The myth persists partly because trucking doesn't require a college degree, and people who measure status that way assume the career is a fallback. That measurement is wrong, and it's getting more wrong every year. A skilled trade career with strong pay, real autonomy, and meaningful work is not a consolation prize.

**Myth 3: "OTR drivers never see their family."**

OTR drivers are away more than other workers, but "never" is a stretch. Most OTR carriers run schedules that get drivers home for two to three days every two to three weeks, and many run more frequent home time depending on the lane. The bigger issue isn't the absence — it's how the home time gets used.

Drivers who treat home time as a recovery period and not much else end up missing the moments that matter even when they're physically there. Drivers who plan home time intentionally — meals, events, real conversations — find that even shorter home stretches feel like real connection. The relationship between OTR work and family life is workable, but it requires effort on both sides.

And if home time every night is what matters most, regional and local work are realistic year-two options for drivers who handle year one well.

**Myth 4: "You'll make \$100K your first year."**

We covered this in Checkpoint 2, but it shows up in so many recruiting ads that it's worth naming again as a myth. The realistic first-year range for a new CDL holder with a clean record is \$45,000 to \$65,000, depending on the carrier, the freight, and how hard you're willing to run.

The \$100K number is real for experienced drivers in specialized lanes, but it isn't a year-one expectation. Anyone telling you otherwise is selling you something — usually training tied to a contract, a job at a high-turnover carrier, or a lease-purchase deal that won't end well.

This is the part of the industry where realistic expectations protect you. The drivers who walk in expecting \$100K in year one are the ones most likely to quit when reality lands.

**Myth 5: "You can't have a family and drive truck."**

Hundreds of thousands of drivers have families and make it work, some OTR, some regional, some local. What they share isn't a particular type of trucking — it's a particular approach to the relationships at home.

The drivers who maintain families do three things consistently. They communicate intentionally instead of when it happens, they respect what their partner is dealing with at home and don't minimize it, and they make home time count instead of treating it as downtime.

The trucking industry isn't built to make family life easy, but it doesn't make it impossible. The drivers who think otherwise usually didn't do the planning, and the trucking gets blamed for what was really a lack of preparation.

**Myth 6: "You have to own your truck to make real money."**

The owner-operator path can produce the highest income in trucking, but it isn't the only path to strong money. Veteran company drivers in specialized freight — hazmat, tanker, flatbed, heavy haul — regularly clear \$90,000 to \$110,000 a year without owning anything. Local and LTL drivers in established carriers can match or exceed those numbers in mature markets.

The owner-operator math sounds better than it actually plays out for most drivers. Gross income is high, but the costs of fuel, maintenance, insurance, equipment, taxes, and downtime eat a meaningful chunk of what the recruiting ads show. The net for a well-run small business is often comparable to what a strong company driver makes — without the business risk.

If becoming an owner-operator is your goal, that path is real. But "you have to own your truck to make real money" is recruiter-pitched, not driver-experienced.

**Myth 7: "The trucking industry is dying."**

Freight tonnage in the U.S. has grown steadily over decades, with cyclical dips during recessions. The industry handles roughly 70% of all freight moved domestically by weight, and that share isn't dropping. The driver shortage that gets talked about in industry coverage is real, with projections suggesting a gap of tens of thousands of drivers for the foreseeable future.

The myth comes partly from cyclical downturns getting reported as long-term decline, and partly from the autonomous-truck narrative we already addressed. Neither holds up to actual data on freight volume or industry employment.

The industry is changing — electric trucks are entering some fleets, telematics is everywhere, and operational models are evolving. But changing isn't dying, and the people who continue to move freight will continue to be paid to do it.

**Myth 8: "You'll be alone all the time."**

The work involves significant time alone, but "all the time" misses what's actually there. Truck stops are social environments — drivers eating together, talking shop, asking for advice. CB radio still works for casual contact on the road. Many drivers maintain phone friendships with other drivers they've met along the way.

For drivers who want it, the trucking community is real, and for drivers who don't, the solitude is genuinely there. Either preference is fine — the point is that the lifestyle isn't an enforced isolation, it's a structure that gives you a lot of time with yourself and lets you choose how much community you want around it.

The drivers who struggle with loneliness in this career are often the same drivers who struggle with it in other jobs. The drivers who thrive in solitude or who actively build a small community on the road find that the lifestyle works fine.

## WHAT THIS MEANS FOR YOUR DECISION

If you've been carrying any of these myths around, this is the place to set them down. None of them are accurate, and most of them stop people from making decisions that would actually serve them well.

The career you're considering is more durable, more flexible, more financially viable, and more compatible with a real life than the most common myths suggest. It's also harder than most recruiting ads admit — both of those things can be true at the same time.

The last checkpoint puts everything together — your decision framework, the questions to ask yourself, and the next step.

### TAKE FROM THIS CHECKPOINT

## THE MYTH AUDIT — RECAP

- Self-driving trucks aren't replacing drivers in any meaningful timeframe. The most credible projections still put fully autonomous freight a decade or more out.
- Trucking isn't a fallback career. The drivers who succeed chose it on purpose, and most of them could be doing other things.
- OTR drivers can absolutely have families. It takes deliberate effort, but plenty do it well.
- \$100K in year one is rare and usually misleading. Realistic year-one numbers are \$45K to \$70K depending on lane.
- Owner-operator isn't a shortcut to wealth. It's running a small business, with all the risks and rewards that come with one.

*Next: the framework for making your decision.*

CHECKPOINT 09

# YOUR DECISION FRAMEWORK

---

You've made it through the guide. By now, you have a clearer picture of what a trucking career actually looks like, what it pays, what it costs, what it asks of you, and what kind of training and first job will set you up for success.

**Y**ou've made it through the guide. By now, you have a clearer picture of what a trucking career actually looks like, what it pays, what it costs, what it asks of you, and what kind of training and first job will set you up for success. The last step is bringing all of that information together into an actual decision.

This checkpoint isn't going to tell you what to do — it's going to give you the framework that helps you figure it out, with three sets of questions to work through, the red and green flags to look for in your own situation, and a clear timeline for the next 90 days regardless of which direction you end up going.

## 10 QUESTIONS TO ASK YOURSELF

These aren't quiz questions, and there are no right answers. Sit with them, be honest, and remember that the decisions that hold up over time are the ones you make with clear eyes.

**1. After reading this guide, do I want this more, less, or about the same as I did when I started?**

The direction of that movement is information.

**2. Can I name three specific things about this career that fit me, and three that worry me?** If

you can't, you don't have a clear enough picture yet.

**3. Do I have a real plan for the financial gap — training cost plus lost wages until my first paycheck?** A vague plan isn't a plan.

**4. If I have people at home, have we had the real conversation about what this would mean for them?** Not "I'm thinking about it" — the actual conversation.

**5. Am I willing to start at the bottom for 6 to 12 months, even if my expectations of myself are higher?** The first year is the toll — pay it once, and pay it well.

**6. Do I have a clean enough driving record and a manageable enough background to actually get hired?** If you're not sure, find out before you spend money.

**7. Have I talked to at least one actual driver — not a recruiter, not a school admissions rep — who's currently doing this work?** The internet is full of voices — find one real one before you commit.

**8. Am I prepared to give this work two years before judging whether it suits me?** Year one is hard for almost everyone, and year two is where the real career starts.

**9. What's my "this isn't working" plan? What does it look like if I need to leave the industry, and can I survive that?** A career decision is also a risk-management decision.

**10. Why this, and why now?** If you can answer that clearly, you're ready, and if you can't, sit with it longer.

## 10 QUESTIONS TO ASK A DRIVER

If you only do one thing before enrolling anywhere, do this. Find an actual driver — through family, through your school, through LinkedIn, through a friend of a friend — and ask them these questions. A 30-minute conversation with somebody who's done the work is worth more than any guide, including this one.

- 1. What did the first year actually look like for you?**
- 2. What surprised you most when you started?**
- 3. What's the hardest part you didn't expect?**
- 4. What would you have done differently if you could start over?**
- 5. How does your pay compare to where you thought you'd be?**
- 6. How did your family situation play out, and how did you handle the home-time question?**
- 7. What did you do when things got hard? Because they did get hard.**
- 8. If you could only give a new driver one piece of advice, what would it be?**
- 9. Are you still glad you got into this work?**
- 10. Would you recommend it to your own kids?**

If the driver says yes to nine and ten, you're talking to somebody who's thriving, and if they say no to both, you're talking to somebody who can give you the honest view of what didn't work. Either conversation is valuable.

## 10 QUESTIONS TO ASK ANY SCHOOL

We covered these in detail in Checkpoint 4, so they're listed here in compressed form as a reference you can take into any school visit, phone call, or website review.

1. Are you on the FMCSA Training Provider Registry, and what's your provider number? 2. What's your student-to-instructor ratio in behind-the-wheel training? 3. How many hours of actual behind-the-wheel time will I get? 4. Do you train on manual transmission, or only automatic? 5. What's the all-in cost — tuition, fees, books, testing, everything — in writing? 6. What's your first-attempt pass rate? 7. What financial aid do you accept? 8. Can I talk to current students or recent graduates? 9. Do you require me to work for any specific carrier or pay back tuition if I don't? 10. What happens if I don't pass the test the first time?

If a school can't answer all ten of these clearly and quickly, look elsewhere.

## RED FLAGS AND GREEN FLAGS IN YOUR OWN SITUATION

This is the honest mirror, and some of these will apply to you while others won't. The point is to look at where you actually stand before you make a decision.

### **Green flags**

- You've answered most of the self-assessment questions back at the front of the guide as Yes. - You can clearly articulate why you want this career, separate from anyone else's expectations. - You have a financial plan that doesn't require borrowing from a contract you can't get out of. - The people at home are informed, supportive, and realistic about what's coming. - Your driving record and background will pass a normal carrier review. - You've already had at least one honest conversation with a current driver. - You can name what you'd do if the work didn't suit you, and the answer doesn't ruin you.

### **Yellow flags — worth examining before you commit**

- You answered "maybe" on more questions than you answered "yes" or "no." - You feel pressure to make a decision quickly because of money, time, or someone else's timeline. - You haven't talked to any actual drivers, only recruiters or admissions reps. - You're picking a school based on price, location, or marketing rather than the criteria in Checkpoint 4. - Your family situation includes people who would be significantly disrupted by your absence and you haven't worked through the details.

### **Red flags — stop and reassess**

- You're considering this because you have no other options and you're hoping for the best. - Your record or health makes it likely you wouldn't pass the qualification standards in Checkpoint 5. - You're being pushed into a company-sponsored contract you don't fully understand. - You're considering a lease-purchase deal as your starting point. - You haven't been honest with yourself or your family about what the work actually involves.

If you have green flags across the board, you're ready to move. Yellow flags mean working on them before you enroll. Red flags mean this isn't "no forever" — just "not yet."

## WHAT TO DO IN THE NEXT 90 DAYS

If you've decided you want to pursue this career, here's the structured path. The drivers who handle the first 90 days well almost always have stronger first years than the drivers who don't.

### Next 7 Days

- **Talk to one driver.** If you haven't done this yet, this is the first step. Use the questions in this checkpoint.
- **Get a DOT physical scheduled.** A 20-minute conversation with a certified medical examiner now will tell you whether you'll qualify, before you spend money on tuition.
- **Pull your motor vehicle record.** Many states let you do this online for a small fee. Know exactly what carriers will see.
- **List your financial aid possibilities.** Look at WIOA, Michigan Works, VA benefits, TAA, MRS, and other programs you might qualify for, and make a list of what to apply for.

### Next 30 Days

- **Visit at least two schools.** Use the 10 questions in Checkpoint 4. Take notes, and compare them side by side.
- **Apply for the financial aid programs you qualify for.** Most have specific application processes and timelines, and the earlier you start, the better.
- **Have the real conversation at home.** If you've been having a vague version, this is the month to have the specific one.
- **Start building the financial cushion.** Whatever you can save in the next month will give you more options when training and first-job decisions come up.

### Next 90 Days

- **Enroll in the school that fits the green-flag criteria.** Not the cheapest, not the closest, not the slickest — the one that meets the standards in Checkpoint 4.
- **Get your CLP and start training.** The clock starts now.
- **Stay clean.** No moving violations, no anything that complicates your record before you've even started.
- **Start thinking about your first job.** Use the questions in Checkpoint 6 to build a list of carriers worth talking to when training wraps up.

By day 90, you'll be in training, you'll have a clear financial picture, and you'll have a real plan for the first job that comes after.

## WHAT THIS ALL COMES DOWN TO

We started this guide with a promise — to walk you through the real version of a CDL career, name the traps, give you the questions to ask, and help you make an honest decision. We've held up our end.

You know what the work looks like, what it pays, what it costs, what it asks of you, and how to choose where to train and where to start. You know what to watch for and what to walk away from. You know what kind of person tends to thrive in this work and what kind tends to struggle, and you have an honest read on which one you're closer to.

The rest is yours. Take the time, ask the questions, talk to the drivers, visit the schools, and have the conversations at home. When you're ready to decide, decide.

● A NOTE ABOUT MTDS

# THE CLOSE THAT COMES WITH THIS.

You've read the entire guide, and we owe you the close that comes with that.

We made this resource because we wanted future students to be able to make this decision the way we wish more people did — with full information, with realistic expectations, and without being pressured into a contract or a carrier they weren't ready for. That work isn't finished by getting somebody to enroll — it's finished by helping somebody make a good decision about their life, even when that decision sends them somewhere else.

If you've read this and decided trucking isn't for you, we mean it when we say that's a good outcome. Better to know now than to find out the hard way.

And if you've read this and you're ready to start, here's what we can tell you about Midwest Truck Driving School.

We're based in Escanaba, Michigan, and we train Class A CDL drivers across a range of programs designed to fit different starting points and different financial situations. We accept Klarna financing, WIOA, Michigan Works, MI/WI DNR programs, MRS, VA Educational Benefits, TAA, TARFF Educational Loans, bank loans, and standard payment plans. We're on the FMCSA Training Provider Registry, our equipment is modern and maintained, our student-to-instructor ratios stay low, and our placement team works with multiple carriers rather than a single recruiting pipeline.

If any of that sounds like what you've been looking for, we'd be glad to talk. There's no enrollment pressure attached to the conversation — we'll answer your questions, walk you through your options, and help you figure out the right next step, whether that ends at MTDS or somewhere else.

You can reach us at:

**Phone:** 906-789-6311 (In-Person) · 906-212-5311 (Online)

**Email:** [info@midwesttruckdrivingschool.com](mailto:info@midwesttruckdrivingschool.com)

**Web:** [midwesttruckdrivingschool.com](http://midwesttruckdrivingschool.com)

If you're still figuring out whether trucking is right for you and you'd like to talk through it before committing to anything, that conversation is on the table too — no sales pitch, no

● RESOURCES

# WHAT YOU'LL ACTUALLY NEED.

A short list of the things you'll actually need during this process, in one place.

## FMCSA TRAINING PROVIDER REGISTRY

The federal database of CDL training providers. Verify any school here before enrolling.

[tpr.fmcsa.dot.gov](http://tpr.fmcsa.dot.gov)

---

## NATIONAL REGISTRY OF CERTIFIED MEDICAL EXAMINERS

Find a DOT-certified medical examiner near you for your DOT physical.

[nationalregistry.fmcsa.dot.gov](http://nationalregistry.fmcsa.dot.gov)

---

## CAREERONESTOP (WIOA LOCATOR)

The federal locator for American Job Centers, where you apply for WIOA training funds.

[careeronestop.org](http://careeronestop.org)

---

## VA EDUCATION AND CAREER COUNSELING

For veterans using the Post-9/11 GI Bill or related benefits for CDL training.

[va.gov/education](http://va.gov/education)

---

## TRADE ADJUSTMENT ASSISTANCE (TAA)

For workers displaced by foreign trade, accessed through your state unemployment office.

[dol.gov/agencies/eta/tradeact](http://dol.gov/agencies/eta/tradeact)

---

## DOT DRUG AND ALCOHOL CLEARINGHOUSE

The federal database that tracks drug and alcohol program violations for CDL holders.

[clearinghouse.fmcsa.dot.gov](http://clearinghouse.fmcsa.dot.gov)

---

## 988 SUICIDE AND CRISIS LIFELINE

Call or text **988**. Available 24/7 if you or somebody you know is struggling.

---

---

**● GLOSSARY**

# THE TERMS THAT **COME UP MOST.**

A quick reference for the trucking terms that show up most often in this guide and in the industry.

---

<b>BTW</b>	Behind-the-wheel. The hands-on portion of CDL training in an actual truck.
<b>CDL</b>	Commercial Driver's License. The credential required to operate vehicles above defined weight or passenger thresholds.
<b>CLP</b>	Commercial Learner's Permit. The learner's version of a CDL, required before testing for the full license.
<b>CPM</b>	Cents Per Mile. The most common pay structure for OTR and regional drivers.
<b>DEDICATED</b>	A carrier contract that hauls freight exclusively for one shipper, with predictable lanes and schedules.
<b>DOT</b>	U.S. Department of Transportation. The federal department overseeing trucking regulations.
<b>ELD</b>	Electronic Logging Device. The federally required electronic system for tracking hours of service.
<b>ELDT</b>	Entry-Level Driver Training. The federal rule requiring registered training before initial CDL testing.
<b>FMCSA</b>	Federal Motor Carrier Safety Administration. The DOT agency that regulates commercial trucking.
<b>GVWR</b>	Gross Vehicle Weight Rating. The maximum total weight of a vehicle as designed by the manufacturer.
<b>HAZMAT</b>	Hazardous materials freight. Requires the H endorsement and a TSA background check.
<b>HOS</b>	Hours of Service. Federal regulations governing driving and rest periods.
<b>LTL</b>	Less-than-Truckload. Carriers that haul partial loads from multiple shippers on one trailer.

A FINAL WORD · THE LAST PAGE

YOU'VE GOT THE PLAYBOOK  
**NOW GO MAKE  
A REAL DECISION.**

---

If trucking turns out not to be your path, that's the right outcome. If you're more sure than ever, we'd love to talk — whether you train with us or somewhere else.
